Aquatic
1700 N. Delilah St.
Corona, CA 86268

June 28, 2016

Subject: **ANSI Z124.1.2-2005 and ASTM F446 testing; Grab Bar/Seat Strength testing**

To Whom It May Concern:

Aquatic is a global supplier of fixtures for the Sanitary Ware (Bathware), market. We are a United States manufacturer of gelcoat and acrylic bathing products. Any grab bar or seat, labeled as such, sold as part of our units, complies with ANSI Z124.1.2-2005 and ASTM F446, in regards to structural strength testing.

Any aftermarket grab bar or seat, which is compliant with the regulatory standards listed above and installed per the manufacturers specifications to an Aquatic unit reinforced at the factory for the purpose of adding a aftermarket grab bar and/or seat, would be compliant to the strength rating required for Grab Bars (250lbs under ASTM and 292lbs under ANSI) and 300 pounds for Seats (under those standards). Anyone wishing to install aftermarket grab bars or seat to an Aquatic unit, should reference letter "job-site installation of owner-supplied grab bars 2 22 11".

Sincerely,

Tom Kobel
Sr. Product Manager
Aquatic
